

Who can join?

The SIA is an organisation of professionals from all sections of the stormwater industry, including those studying, regulating, designing, supplying components, building and operating systems.

Members come from:

- local and state government bodies
- consultants
- contractors and construction supervisors
- materials and equipment suppliers, including pipe manufacturers and makers and installers of monitoring equipment
- educators and researchers
- planners and other professionals who liaise and interact with drainage systems operators

The objective of a membership with the widest representation is to ensure an integrated approach which has taken into account the sensitivities and imperatives of all sections of the industry.

Membership can be corporate for organisations, or private for individuals. The Stormwater Industry Association allows members to stay in contact with a broad spectrum of people involved in the stormwater industry, participate in locally based joint seminars with organisations such as AWA and government and regular dinner seminars covering issues relevant to this diverse and developing industry.

SIA Queensland provides opportunities for all interested practitioners and organisations to network within and across disciplines and to influence stormwater policy, legislation and industry guidelines at local and national levels.

The Stormwater Industry Association seeks to cater for the many interests of those involved in the stormwater industry with the aim of promoting cohesion, standardised practices and a common focus.

"the voice of stormwater in Queensland"

The Status of Stormwater

The impact of stormwater on the ecological health and sustainability of our waterways is being increasingly recognised by the general public. As a consequence, the stormwater industry is faced with the challenge of providing infrastructure which meets the traditional aims of public safety and convenience, whilst enhancing the environment or at least limiting any adverse impacts.

The future will require the industry to maintain an ongoing innovative approach to the management of stormwater, looking beyond current and traditional solutions. Stormwater managers will be involved in developing integrated approaches to planning and development to meet council and government needs and regulations.

The Stormwater Industry Association, through its diverse membership, is at the forefront of these changes and innovations. The Association provides members with the opportunity to advance their knowledge and skills in the wide range of issues impacting on stormwater and its relationship with people.

SIA Objectives

SIA Queensland aims to be the leading association for the advancement of stormwater management and the dissemination of knowledge and information on stormwater issues.

SIA Queensland's objectives are to be:

- a credible source of information on stormwater issues;
- the spokesperson for the industry; and
- a provider of accredited training.

What the SIA does

The SIA's range of activities includes:

- promoting the industry's profile through an active, but targeted public relations effort;
- marketing stormwater management as an industry;
- conducting pertinent and informative seminars, exhibitions, conferences, courses and workshops for members and other interested parties;
- providing networking opportunities for industry members through regular meetings and forums;
- maintaining an industry database;
- encouraging product development and standardisation;
- establishing and maintaining a dialogue with all levels of government;
- preparing or contributing to guidelines and standards.
